

HOW DOES A HOME PURIFICATION SYSTEM WORK?

If you are looking to make your home healthier, the right amount of fresh air and air purification are your greatest ally. As harmful particles like bacteria, viruses, allergens, and chemicals enter your home through tiny air holes or open windows and doors, they are absorbed into your heating and cooling system where they recirculate the air you and your family breathe, day after day.

In order to remove these harmful contaminants and make the air in your home healthier, air purification is often necessary. The award winning Intellipure home purification system is a medical grade air purification system used by many major medical centers such as Mayo Clinic and NY Presbyterian. This same technology is now available for use in your home to keep you and your family safe and healthy all year long!

Pair the Intellipure air purification system with a whole home fresh air system for the ultimate healthy home!

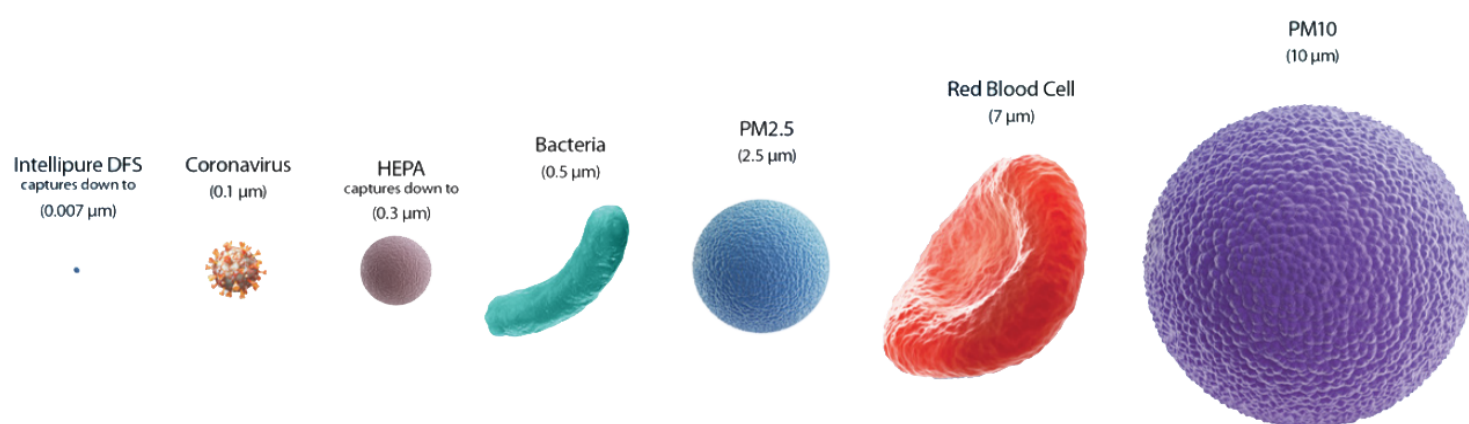

The Intellipure air purification system deactivates mold, viruses, fungi and bacteria inside the filter.

Made right here in Upstate NY!

The whole house air purification system attaches to your existing heating and air conditioning duct system to filter and disinfect all the air circulating throughout your home.

WILL THE INTELLIPURE SYSTEM WORK AGAINST COVID-19?

The pressing question is, will the Intellipure system filter out COVID-19? The short answer is, it is too early to tell whether this filtration system is certifiably effective at stopping the spread of that particular virus throughout a home. However, we do know that the Intellipure system has been proven effective against particles similar, and even smaller than the Coronavirus, eliminating particles down to 0.0007 microns. This is 40 times more effective than HEPA filters!

LOOKING TO BREATHE A LITTLE EASIER IN YOUR WESTCHESTER COUNTY AREA HOME? ASK THE HEALTHY HOME EXPERTS AT HEALTHY HOME ENERGY & CONSULTING.

Schedule a Healthy Home Evaluation to learn more about the state of your indoor air.
